Reflections on appearance

- What is appearances?
- How does it link to stigma?
- How can you capture/measure appearance?
- What are the *causes* of inequality in appearance?
- What are the *consequences* of inequality in appearance?

Case on inequality

Design an intervention study addressing inequality in vocational schools. The goal is to improve their health, health habits and general wellbeing

1. Overall issues

- How would you capture inequality and in what area should it be considered?
- How do you capture what could make the students want to change their health behaviour?
- How will you address this/these overall issues?

2. Design

- What design will you use?
- In practice what intervention(s) will you use and how should they be implemented ?
- How would you address the heterogeneity among the students?
- What issues are not addressed? And could they have some unintended impact?

3. Impact

- What results do you expect to find?
- How do you make sure that the teachers implement the intervention?
- Are the interventions sustainable?
- Can it be implemented at a national level?

Discussion of the case

1. What overall issues did you consider and why?
2. What design and interventions did you apply? How should they be implemented in practice?
3. What intended and unintended impact do you expect the interventions to have ?
